- 1. The four rural County Board districts have been allocated \$2m (\$500,000 each) in the 2022 ARPA Budget per previous discussions.
- 2. The Board has not established a formal deadline for submission of ARPA proposals, however ELUC will consider proposals received by April 1, 2022 for allocation recommendations at its April 7, 2022 meeting.

# Sangamon Valley Public Water District 709 North Prairieview Road Mahomet, Illinois 61853

Date: March 7, 2022

To: Darlene Kloeppel, Champaign County Executive

From: Kerry Gifford, General Manager

Sangamon Valley Public Water District

Re: Request for ARPA Funds in the amount of \$500,000.

Please see the attached following items: Engineer agreement, Engineer design cost and a Project summary of the gas leak affected area. The Water District respectfully request the use of ARPA Funds in order to advance the water main project to the shovel ready stage.

Sincerely,

SANGAMON VALLEY PUBLIC DISTRICT

Kerry Gifford General Manager

### **ORIGINAL**

## TASK ORDER NO. 033

CONTINUING PROFESSIONAL SERVICES AGREEMENT
Between Sangamon Valley Public Water District (Owner) and
Donohue & Associates, Inc. (Donohue)
Date of Original Executed Agreement: August 26, 2014
Date of this Task Order: February 25, 2022

### TASK ORDER NAME/DESCRIPTION

**Northward Expansion Design Services 2022** 

### A. TASK ORDER GOALS

The goals of this Task Order are as follows:

The Sangamon Valley Public Water District (District) desires to expand its boundaries to the north by extending water mains to nearby subdivisions that are currently served by private wells, jointly driven by interest from potential users in this area.

The northernmost portion of the present SVPWD Service Area along Illinois Route 47 ends at the Thornewood North Subdivision. SVPWD's treatment facility provides customers with softened finished water that is sourced from the Mahomet Aquifer (the primary groundwater source of drinking water supply for much of Champaign County). Residents who live outside the SVPWD Service Area, including those residents in Newcomb Township (located north of Thornewood North Subdivision), obtain drinking water from private wells. Most of those wells were drilled into a more northern portion of the Mahomet Aquifer. The rural area to the north of SVPWD's present Service Area also contains the Manlove Field natural gas storage facility, operated by Peoples Gas Light & Coke Company. The facility is an underground storage unit 4,000 feet below ground in a sandstone, saltwater-bearing formation, below the Mahomet Aquifer. Various reports indicate that in 2016, a leak occurred in a vertical pipeline that extends into the gas storage area and natural gas escaped through the leak and into the Mahomet Aquifer.

In September 2018, a group of residents affected by this event met with SVPWD officials to determine whether SVPWD could provide potable water to their residences, for domestic use only. SVPWD agreed to examine that possibility and to evaluate the actions needed and cost thereof to extend public water mains to the affected properties.

The SVPWD has requested that Donohue & Associates, Inc. perform design engineering and bidding services to design improvements that consist of the installation of a booster pump station and a water main system expansion north along Illinois Route 47 to serve prospective customers located near the gas plant, with additional loops to the east and west to serve gas-affected customers, and provide water services to new developments. The combined length of all proposed water mains is 141,300 lineal feet. Due to the nature of the existing development in this area, and to provide a high level of water quality, this main extension is planned to provide rural water service but will not be sized for any degree of fire protection.

Due to funding availability, this project will be developed into three separate phases to be bid individually as construction funding becomes available.

#### **B. SCOPE OF SERVICES**

Basic Services to be provided by ENGINEER for this Project under this Agreement are as follows:

### 1. Project Development and Management

- 1.1. Assign Terry Boyer, PE, as the Project Manager who will coordinate Project activities and will be the principal liaison between the OWNER and ENGINEER.
- 1.2. Prepare a Project plan that addresses the Project background and location; the Project purpose and description; OWNER and Project team member information and roles; a work outline for design services; Project schedule; Project budget by work tasks; and additional information that may be appropriate.
- 1.3. Conduct a project kick-off meeting with the OWNER's representatives to review Project goals and objectives and to review the proposed Project schedule.
- 1.4. Provide monthly progress reports to the OWNER to document services performed and schedule status. This is typically performed as part of the monthly Project invoicing routine.

### 2. Design Services

- 2.1. Process Design and Layout Phase
  - 2.1.1. Review applicable available studies, reports, drawings, design summaries, and other existing facility information regarding the OWNER's existing facilities.
  - 2.1.2. Prepare and submit environmental clearance letters for IHPA, IDNR and USACE.
  - 2.1.3. Perform utility coordination for utilities in the proposed project area.
  - 2.1.4. Perform preliminary equipment selection based on preferences of OWNER's staff and ENGINEER recommendations.
  - 2.1.5. Prepare water main design calculations for expansion of the system. A WaterGEMS model for the entire proposed rural water main network will be developed.
  - 2.1.6. Contract for topographic site survey services as needed to design the Project. The rural water main drawings will be developed using Champaign County GIS aerials and 2' contour lidar data in lieu of detailed survey. Detailed topographic survey will be performed at the pump station site only.
  - 2.1.7. Contract as needed for geotechnical engineering services for subsurface geotechnical exploration to determine the likely subsurface foundation conditions for bore and jack locations.
  - 2.1.8. Assist the District in preparation of easement plats. The easement plats will be developed for 120 easements, which covers the gas impacted customers. The Owner

- will develop the legal easement documentation with the District's attorney and will be responsible for all easement negotiations.
- 2.1.9. Prepare flow sheets for the proposed improvements and conduct an internal flow sheet review meeting.
- 2.1.10. Prepare preliminary process and instrumentation diagrams (P&IDs) after the flow sheet meeting.
- 2.1.11. Develop new process motor list and other electrical loads.
- 2.1.12. Identify major utilities and their approximate locations within the Project site limits.
- 2.1.13.Utilizing available facility drawings and mapping, field visit observations, and discussions with OWNER, prepare preliminary layout drawings for Project facilities and conduct an internal preliminary layout review meeting.
- 2.1.14. Prepare a process design and layout phase submittal consisting of written descriptions of the Project indicating the proposed facilities along with the basis for selection, the final design criteria, a summary of preliminary hydraulic design calculations, a listing of any potential conflicts including environmental impacts and recommended solutions, any special construction requirements/procedures that may be known at the preliminary design stage, and the process design and layout phase drawings.
- 2.1.15. Prepare a preliminary opinion of the probable construction cost based on the preliminary layout drawings.
- 2.1.16.Perform an internal quality review of the preliminary layout drawings, project design description, and preliminary opinion of the probable construction cost.
- 2.1.17.Submit a PDF copy of the process design and layout phase submittal to the OWNER for review and comment.
- 2.1.18.Conduct a process design and layout review workshop with the OWNER's representatives to get their review comments and input on any necessary changes for the Project design. Prepare workshop notes documenting proposed changes to the process design and layout phase completion documents and incorporate comments and any necessary changes into the design.

#### 2.2. Final Layout Phase

- 2.2.1. Complete hydraulic, structural, and other computations to define final size and location of new structures or existing structure modifications.
- 2.2.2. Develop rural water main drawings and associated details.
- 2.2.3. Develop final layout drawings, with designer notes for final layout review and approval.

- 2.2.4. Perform internal P&ID critique and final layout meetings. Revise P&IDs and final layout drawings after these meetings.
- 2.2.5. Prepare an index of proposed specifications for the final layout submittal.
- 2.2.6. Update the opinion of the probable construction cost based on the completed final layout design documents.
- 2.2.7. Submit for review and comment by the OWNER a PDF copy of the final layout drawings (half size), specifications index, the final design criteria, a summary of final hydraulic design calculations, any special construction requirements/procedures that may be known at the final layout design phase, a listing of permits required for construction approval, and the updated opinion of the probable construction cost.
- 2.2.8. Conduct a final layout review workshop with the OWNER to get the OWNER's review comments and input on any necessary changes for the Project design including design changes to reduce the construction cost. Prepare workshop notes documenting proposed changes to the final layout design completion documents and incorporate comments and any necessary changes into the design.

### 2.3. Final Design Construction Drawings Phase

- 2.3.1. After incorporation of the final layout workshop review comments and requested changes, prepare and distribute base sheet drawings to design disciplines in order to develop construction drawings for one bid package to be advertised for bids and to be constructed by one prime contractor.
- 2.3.2. Finalize P&ID drawings.
- 2.3.3. Prepare construction specifications utilizing the ENGINEER's master specifications.
  - 2.3.3.1. Front end bidding and contract documents will be prepared using applicable Engineers Joint Contract Documents Committee (EJCDC) documents for Division 0 and will be prepared for one bid package to be advertised for bids and to be constructed by one prime contractor.
  - 2.3.3.2. Technical specifications will be prepared using the Construction Specifications Institute (CSI) 3-part format for 50 Divisions.
- 2.3.4. Conduct an internal meeting to coordinate location and specifications of wired components.
- 2.3.5. Perform an internal designer review of the prepared final design construction drawings and specifications and then incorporate review comments.
- 2.3.6. The opinion of the probable construction cost will be updated based on the prepared final design construction drawings and specifications after designer review comments are incorporated. Also, revise the opinion of probable construction cost if necessary after the quality review comments are incorporated.

- 2.3.7. Perform an internal quality review of the final construction drawings and specifications after designer review comments are incorporated. Incorporate quality review comments.
- 2.3.8. After incorporation of quality review comments, submit a PDF copy of the final design construction drawings (half size), specifications, and updated opinion of the probable construction cost to the OWNER for review and comment.
- 2.3.9. Conduct a final construction drawings and specifications review workshop with the OWNER's representatives to get their review comments and input on any necessary changes for the Project design. Prepare workshop notes documenting proposed changes to the final construction drawings and specifications.
- 2.3.10. Prepare and assist the OWNER in submitting applications after incorporating the final design construction drawings and specifications workshop review comments into the final design documents to file for a construction permit from the Illinois Environmental Protection Agency (IEPA). Provide technical input and assist the OWNER in consultations with appropriate authorities as required to secure permits or approvals from the IEPA. The OWNER shall pay the fee cost for submitting all regulatory agency permit applications.
- 2.3.11.Incorporate review comments received from the OWNER and from the government agencies to which construction permit applications were submitted to finalize the drawings and specifications for bidding. Drawings for bidding purposes will be reproduced at half size unless electronically distributed. The final documents will be signed and sealed by a registered Professional Engineers in the State of Illinois. The drawings and specifications will be prepared for the designed improvements to be bid for up to three projects.

### C. PROJECT CONDITIONS

The scope of services, timing of services, and compensation for services set forth in this Agreement are based on the following conditions:

- Environmental investigations, including archaeological surveys; wetland delineation and mitigation
  design services; hazardous or contaminated area investigations and design of remediation; rare,
  threatened, or endangered species habitat investigations; or other sensitive area investigations are
  not included with this agreement.
- Engineering services for bidding phase services, construction administration, construction observation and application engineering for the project improvements are not included and will be negotiated as an agreement amendment or separate agreement.
- 3. District will reimburse Consultant for any permitting fees incurred.

#### D. PROJECT TIMING

Donohue shall be authorized to commence the Services set forth herein upon execution of this Task Order and as per the existing Continuing Services Agreement covering this Agreement. The deliverables under this Task will be completed as follows:

Easement Development: Within 180 calendar days of receipt of a notice to proceed.

Preliminary Layout Phase: Within 210 calendar days of receipt of a notice to proceed.

Final Layout Phase: Within 240 calendar days of receipt of a notice to proceed.

Construction Documents Phase/Permit Application Submittal: Within 300 calendar days of receipt of a notice to proceed.

#### E. COMPENSATION

Donohue's charges shall be in accordance with Donohue's standard charge-out rates in effect at the time the Services are performed. Routine expenses will be billed at cost. The cost for these Basic Services for this Task Order will not exceed \$499,530.00 without written approval from Owner.

### F. APPLICABILITY TO CONTINUING SERVICE AGREEMENT

The terms and conditions included in the existing Continuing Professional Services Agreement executed between the District and Donohue on August 26, 2014 remain in force and apply to this Task Order. Included in said Agreement, under Part III on page 3 are stipulations and constraints on how often Donohue may invoice the District and when and those provisions remain in force upon this Task Order.

# NORTHERN EXPANSION SANGMON VALLEY WATER SYSTEM.

### **PROJECT SUMMARY**

The Sangamon Valley Public Water District northernmost portion of its present service Area along Illinois Route 47 ends at the Thornwood North Subdivision. SVPWD's treatment facility provides customers with softened finished water that is sourced from the Mahomet Aquifer (the primary groundwater source of drinking water supply for much of Champaign County). Residents who live outside the SVPWD Service Area, including those residents in Newcomb Township (located just north of Thornwood North Subdivision), obtain drinking water from private wells. Most of those wells were drilled into a more northern portion of the MahometAquifer where a natural gas leak occurred.

The rural area that is north of SVPWD's Service Area contains the Manlove Field natural gas storage facility, operated by Peoples Gas Light & Coke Company. The facility is an underground storage unit that was opened in the 1960's. The Illinois State Geological Survey indicates that it is capable of storing around 150 billion cubic feet of natural gas. The storage facility is 4,000 feet below ground in a sandstone, saltwater-bearing formation, below the Mahomet Aquifer. In 2016, a leak occurred in a vertical pipeline that extends into the gas storage area and natural gas escaped through theleak and into the Mahomet Aquifer. Shortly thereafter, local residents near the leak reported observing signs of the gas, with the residents noticing cloudy or milky well water, tiny bubbles in the well water, a film left on the body after taking a shower and in some cases, flammable water.

Currently, residents in the proposed gas leak proposed expansion area are served with private wells varying in age Over 50% of these wells are more than 20 years old and may be in need of mechanical/electrical rehabilitation and/or replacement for even older wells. The water main extension could offer reliable, potable water service to these people a fairly comparable costs for wells that are in need of rehab/replacement. Rather than drilling a new well into a potential methane contaminated aquifer, the residents would be able to connect to the district's water main which provides safe clean drinking water.

The Sangamon Valley Public Water District request Champaign County government provide \$500,000 in ARPA funding to complete the water main extension design work and bring the project to the point of "shovel ready". The total cost for the proposed project is projected to be \$10,020,000. The District is seeking a grant from the Illinois Department of Commerce & Economic Opportunity in the amount of \$3.8 million. The 3.8 million will cover the initial phase of water service to the known gas leak affected homes. The balance of 6,220,000 is to be financed through future grants. These future water main phases will be for homes with older wells and who are close to the gas contamination affected area. These areas will be addressed as state or federal grants monies become available.

Budget summary of the projected cost for the entire water main extension is listed below:

| TOTAL  | \$10,020,000 |
|--|--------------|
| 000  |              |
|  | \$700,       |

### **Technical Memorandum**

### **Project Summary Northward Expansion**

### **Sangamon Valley Public Water District**

Date: August 23, 2021

To: Sangamon Valley Public Water District Board of Directors

Kerry Gifford, General Manager, Sangamon Valley Public Water District

From: Terry Boyer, Donohue & Associates

Re: Northward Expansion Project Summary

The Sangamon Valley Public Water District seeks to expand water service to the northern parts of the new District boundaries, primarily to provide potable water to households whose private wells are contaminated with natural gas from the Peoples Gas storage reservoir.

### **Project Phases**

Phase 1 – Install booster pump station north of Thornewood subdivision and transmission mains to the north to serve the Peoples Gas impacted homes. Cost Opinion = \$3,800,000.

Future Phase(s) – Expand service area and water services to the areas further east of Route 47 and further west of Route 47.

### **Schedule**

Projected grant funding from State Aug 2021 Initiate Design Sep 2021 **Environmental Clearances** 

Sep - Dec 2021

Sep 2021 - Jan/Feb 2022 Easements

Preliminary Design Sep - Dec 2021 Final Design Jan - May 2022 Permitting Feb - May 2022 Bidding May - Jun 2022 Construction July 2022 - July 2023

Water Available to New Customers July 2023

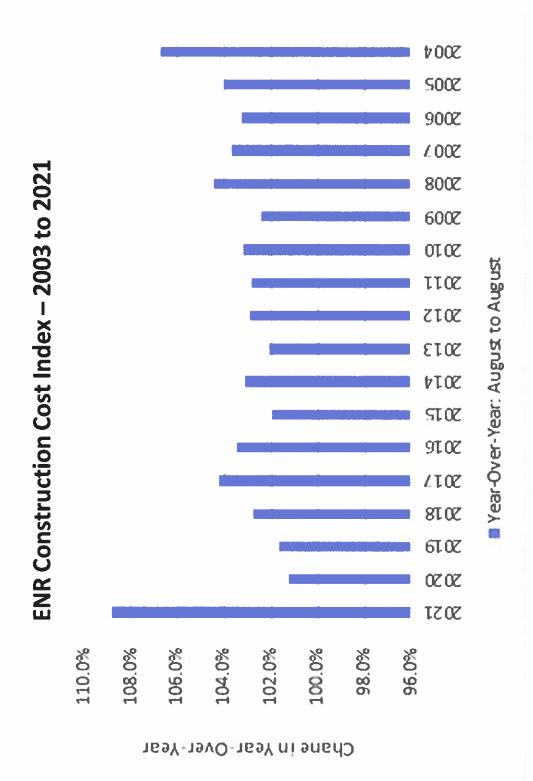

### **Critical Items**

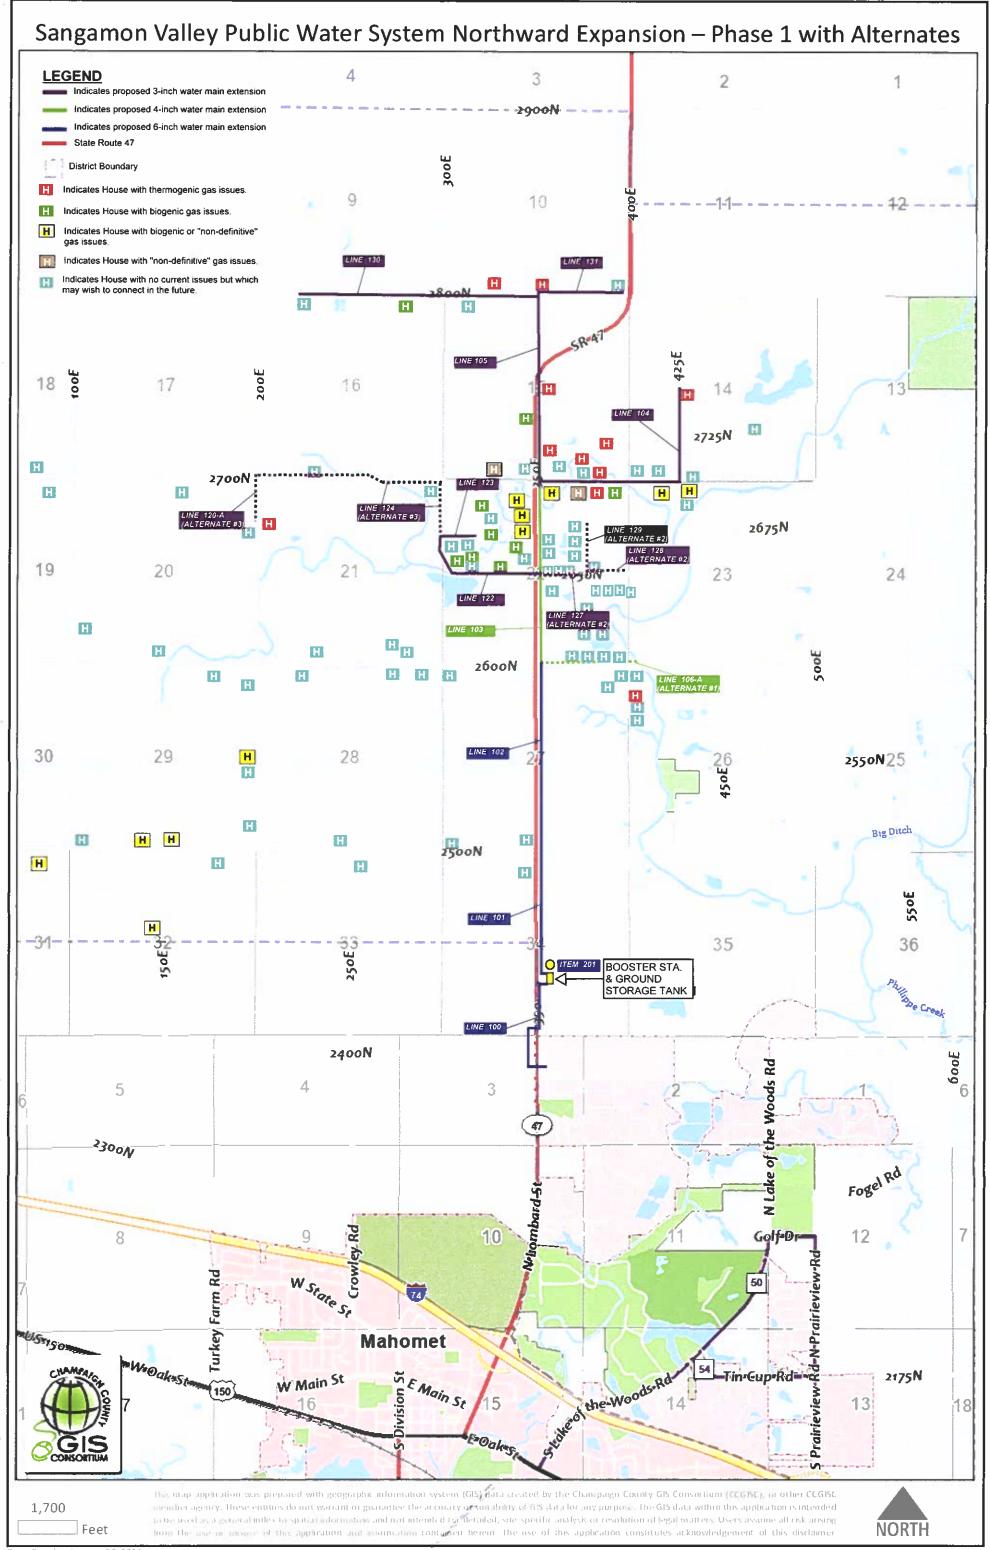

Easements – approximately 120 easements Environmental Clearances - Archaeological Phase I and Phase II WaterGems Model for entire potential system DCEO Administration - can request up to 25% upfront to pay for soft costs **Conceptual Drawings**

**Project Summary**: The Village of Penfield has a 12,000 gallon hydropneumatic tank that serves to maintain pressure in the Village's water distribution system. The tank is original to the water treatment plant and was constructed in 1965. The Village hired a contractor to clean and inspect the interior of the tank in 2019. The tank was found to be in poor condition and should be replaced. The Village wishes to obtain ARPA funding for the replacement of the hydropneumatic tank.

### **Project Timeline**

Design & Permitting: April 2022

Bidding: July 2022

Construction: August 2022

Substantial Completion: February 2023

### **ARPA Funds:**

The Village is requesting \$70,000 from County ARPA funds.

### **Total Funding:**

ARPA Funding: \$70,000 Village Funding: \$35,000

### Impact/ Importance

The Village of Penfield is a community of 130 people in northeast Champaign County. It does not have a water tower and instead relies on a hydropneumatic tank to maintain proper pressure in the water distribution system. The hydropneumatic tank is original to the water treatment plant which was constructed in 1965. The water treatment plant filters and pumps were upgraded in 2012. The hydropneumatic tank has outlived its useful lifespan and needs to be replaced. If the tank were to fail, the Village's water distribution system would lose pressure and the community would be placed on a boil order.

### **Triple Fork Drainage District – Request for ARPA Funds**

We have received only one bid so far it is \$60,000 to remove the culvert East of the road and \$60,000 to remove the part West of the road leaving the part under the road to serve as a bridge.

John Cooper from the Country Engineer's office was at the site and states that a bridge may or may not be warranted in an email I received from him and we need to have a consultant determine that. He estimates a bridge would cost \$300K-\$500K.

Attached are photos I took showing our problem when we have several inches of rain.

This is Corky's Auto center on Rt. 45 in the background is the entrance to Fountain Valley trailer park, at times the water is in the building a foot or more deep when the culvert has some debris in it and we have a lot of rain.

This is the West end of the culvert during a normal rain.

This is the same culvert taken the same day as the first photo of Corky's Auto. I have seen the water higher than this then the water will flow beside the culvert all the way to the other end of the culvert 700 feet away and the flooding at Corky's and Fountain Valley is very bad.

**Project summary** - The Village of Ludlow (Village), Illinois, completed planning documents for financing improvements to its community water supply. The planning for the project split recommended improvements into several phases. Phase 1 included replacement of the equipment at the water treatment plant, replacement of all 6-inch water distribution mains, and replacement of approximately half of the 4-inch water distribution mains. Phase 2 included work to the water tower, refurbishment of the wells, a new building and instrumentation and control at the water treatment plant, replaced the generator and replaced the remaining 4-inch water distribution mains.

Phase 1 was designed in 2019 and bid at the end of 2020. The Phase 1 low bidder's bid was significantly below the budget for Phase 1. The Village with USDA's concurrence has decided to spend the remaining Phase 1 budget replacing a majority of the 4-inch water distribution mains originally included in Phase 2. The installation of the 4-inch water mains originally included in Phase 2 that will now be designed in 2021 and built in 2022.

### Project timeline from the feasibility study -

Complete Design and Submit Plans/Specs to IEPA for Permitting May 13, 2021 June 29, 2021 IEPA Permit Review and Approval Advertise for Bids July 1, 2021 Issue Notice of Intent to Award July 26, 2021 Issue Notice of Award September 6, 2021 Issue Notice to Proceed September 15, 2021 **Substantially Completion** November 30, 2022 **Final Completion** May 15, 2023

**ARPA Funds** - The preliminary cost for the project is \$2,850,000. USDA also has the potential for grant funds for \$1,910,000. That would leave \$550,000 to come out of Village funds. The Village would like to ask for \$400,000 from the Champaign County ARPA funds.

### **Total Funding**

Village funds – \$550,000 Potential USDA grant funds - \$1,910,000 ARPA funds – \$400,000

Impact/importance of project needing completed - The water treatment plant and distribution system have both outlived their useful lifespans. Failure of any equipment would affect effluent water quality and may even halt the production of water. The recent water main breaks could be a precursor for breakdowns in the future that could result in mandated boil orders. Therefore, it is necessary for the Village to complete this project to maintain system integrity and meet public health and safety needs.

Well #3 serves as the primary well, with Well#1 as back up. However, due to its age and lesser capacity, Well#1 cannot be able to keep up with the water demand if the pumping system of Well#3 fails. In order to ensure compliance with the Illinois Environmental Protection Agency standards, it is necessary to refurbish or replace the aging components in a timely manner. The aging infrastructure has resulted in the Village's water supply being evaluated as under noncompliance advisory. If improvements are not made, then the IEPA may issue a formal violation notice.

Ludlow's median household income is \$49,643, the funds are needed to help offset the cost for the residents.

### **VILLAGE OF LUDLOW**

July 16, 2021

Champaign County Board Attn: Diane Michaels 1776 E Washington Street Urbana, IL 61802

RE: Funding for Village of Ludlow Waste Water and Sewer Project

The Village of Ludlow is exploring the opportunity to transition away from individual septic sewer systems. We would like to tie into a system that would allow us to pump waste water to the Village of Rantoul which is 5 miles away.

Currently with the septic systems we are experiencing extensive ground saturation and flooding in many areas of the town. Standing water is causing an extensive problem with mosquitos, water backups and deterioration of property.

Population 375; 141 households with a median average income of \$35,000 per household and more than 15% live below the Federal Poverty Line.

Initial review of a project of this type was estimated by a Champaign County engineer to be \$6 million. Currently construction is underway upgrading the water plant and replacing 73-year-old water mains with the help of a grant from USDA. The Village has an existing loan for \$900,000 for this project.

We are inquiring as to the availability of assistance that can be provided through current programs to strengthen the infrastructure as well as the quality of life for our community, which includes a fully operational grade school, and to stimulate growth in our subdivisions.

We would greatly appreciate your assistance and consideration.

Sincerely,

Steve Thomas
Village President

## Village of Ogden

Champaign County • Ogden, Illinois 61859 • Ph. 217-582-2520

March 29, 2022

Champaign County Environmental Land Use Committee C/O Ms. Darlene Kloeppel Champaign County Executive 1776 East Washington Street Urbana, Illinois 61802-4581

RE: ARPA FUND REQUEST VILLAGE OF OGDEN, ILLINOIS

### Ladies and Gentlemen:

The Village of Ogden requests that the Champaign County Environmental and Land Use Committee consider distribution of a portion of the ARPA funds received by Champaign County to the Village of Ogden. As a small community, Ogden faces challenges in funding large infrastructure projects. The ability of Ogden to collect sales tax revenues is limited, resulting in the primary sources of funds being real estate taxes, user fees, and IDOT MFT funds. This leaves stormwater drainage facilities as the element of infrastructure that must rely most heavily upon general corporate monies as the primary source of funding.

Ogden undertook a Comprehensive Drainage Study in 2015 and identified a backlog of needed drainage facility improvements. Ogden has spent more than \$400,000 over the past 6 years fixing drainage facilities, but still has a backlog of over \$2,000,000 more for uncompleted projects. Outside sources of funding are needed if these critical improvements are to be completed on a timely basis.

In 1984 Ogden constructed a community-wide sanitary sewer collection system and a municipal wastewater treatment facility. For the next 25 years our community was focused upon paying the millions of dollars of debt incurred for that massive project. Ongoing improvements to other existing infrastructure had to be deferred. Only during the past decade has the Village been able to begin addressing the backlog of deferred maintenance and repair of other infrastructure, particularly drainage facilities.

## Ms. Darlene Kloeppel, Champaign County Executive Champaign County Environmental Land Use Committee

March 29, 2022

Page 2 of 2

Ogden forwards three (3) drainage projects for your consideration. Each has unique circumstances that merit funding consideration. Without ARPA funds Ogden will likely be able to undertake only one of these projects. Undertaking a second project may be possible, dependent upon the level of ARPA funds provided. Ogden has suggested a 50% funding match with local funds, but could achieve more progress if the Village match were reduced.

Ogden also submits a Wastewater Treatment Facility Project for your consideration. As previously stated, the Village Wastewater Treatment Facility was constructed in 1984. Over the past few years, some of the treatment systems have reached their functional limit and are no longer performing at acceptable levels. The Illinois EPA recently issued a Notice of Non-Compliance to Ogden, and the Village is in the process of designing the necessary repairs / refurbishment / remodeling. Use of ARPA funds to pay for a portion of the project costs would reduce the rate increase anticipated to provide funds for those improvements.

Finally, I thank you for this opportunity to submit this request to you and to Champaign County. It is unexpected and most generous for Champaign County to offer funding of this type to the smaller communities of Champaign County.

Sincerely,

Village of Ogden

/S/ Gabe Clements

President of the Board of Trustees

## Village of Ogden

Champaign County • Ogden, Illinois 61859 • Ph. 217-582-2520

### **BROADWAY STREET DRAINAGE PROJECT**

### VILLAGE OF OGDEN, CHAMPAIGN COUNTY, ILLINOIS

March 30, 2022

**Project Description**: This project involves improvements to the drainage system that serves as the primary outlet for the "downtown" portion of Ogden. An existing 18-inch diameter pipe constructed with open joints begins along Broadway Street and extends generally southeasterly. This pipe is in poor physical condition and must be routed annually to remove blockages caused by tree roots. In addition, a commercial building was constructed directly over the top of the drain line. Approximately 600 lineal feet of the existing line needs to be replaced. A 400-foot-long portion of Broadway Street currently floods after any significant storm event. Water depth exceeds 3 feet over the street pavement at its worst, and results in flooding of adjacent commercial buildings.

The existing 18-inch diameter storm drain connects to and outlets into an 18-inch diameter farm drainage tile that flows away from the Village, extending for more than one (1) mile before discharging into Camp Creek ditch. Because of the very limited capacity of the existing system this project also involves installation of a secondary overflow pumped drainage system. If the capacity of the 18-inch diameter drain line is exceeded, the drainage pumps will start and pump water to a new drainage system being installed by the Illinois Department of Transportation (IDOT) at the US Route 150 / IL Route 49 intersection

Why Funding Matters: While this project is not the highest priority drainage project for Ogden, it ranks closely behind others. The proposed construction of the Kickapoo Rail Trail in 2022 presents a funding dilemma for the Village. This project will cross the proposed trail improvements. Funding these improvements in 2022 would prevent funding of other more urgent drainage projects due to the limited funds available to the Village. This project provides a dramatically improved drainage outlet for the Village's primary business district. This project is a part of a more than \$2 million backlog of drainage facility improvements needed within the Village.

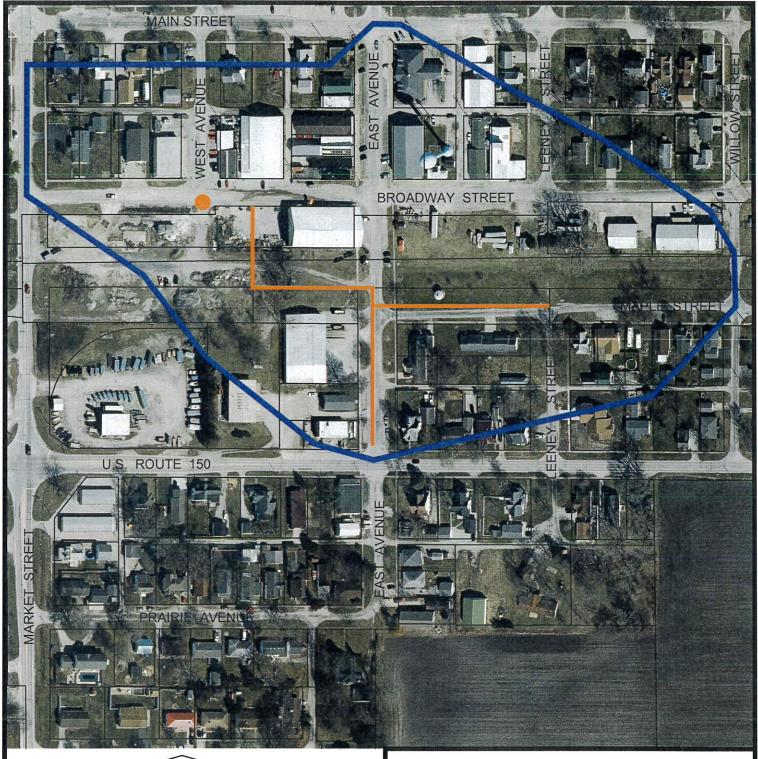

**Estimated Project Construction Cost: \$210,000** 

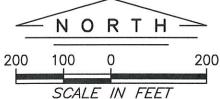

Estimated Total Project Cost: \$240,000

Proposed Village Cost Share: 50%

**Project Timetable:** Project under construction within 150 days ±

Design: 60 days ± Permits: 45 days ± Bidding / Award: 45 days ±

### NORTHEAST OGDEN DRAINAGE PROJECT - PHASE 2

### VILLAGE OF OGDEN, CHAMPAIGN COUNTY, ILLINOIS

March 30, 2022

**Project Description**: This project is intended to provide drainage improvements to the northeastern portion of the Village. The project encompasses 6 full blocks with North Street on the North, West Avenue on the west, Main Street on the south, and Willow Street on the east. 100+ year old, small diameter drain tile lines currently provide the only drainage outlets for this area. The project is intended to replace these drain tile lines with modern storm sewers. The project provides drainage not only within the immediate work area, but also provides improved drainage outlets for the existing drains within an additional 3 blocks of the Village.

This project was identified in the Village 2015 Comprehensive Drainage Study as a high priority project. This project is actually Phase 2 of the improvements. In 2020 Ogden spent over \$250,000 to construct a new large diameter storm sewer line extending from North Street, northerly approximately one (1) mile to outlet into the Union Drainage District #1 Main Channel. Areas of North Street, Kyle Street, Main Street, East Avenue, and West Avenue all experience chronic annual flooding. This project will reduce or eliminate those drainage problems. The project involves the installation of approximately 1,000 lineal feet of storm sewer piping, 9 manholes, street repairs, and other associated improvements.

Why Funding Matters: This project is considered to be the most urgent Village drainage project. Over the past 6 years, Ogden has spent over \$400,000 for drainage system improvements. The 2015 Village Comprehensive Drainage Study identified over \$2.0 million in additional drainage facility project needs. The Village faces a 20-year backlog of needed drainage improvements. An outside source of funding for drainage improvements is urgently needed.

Estimated Project Construction Cost: \$220,000

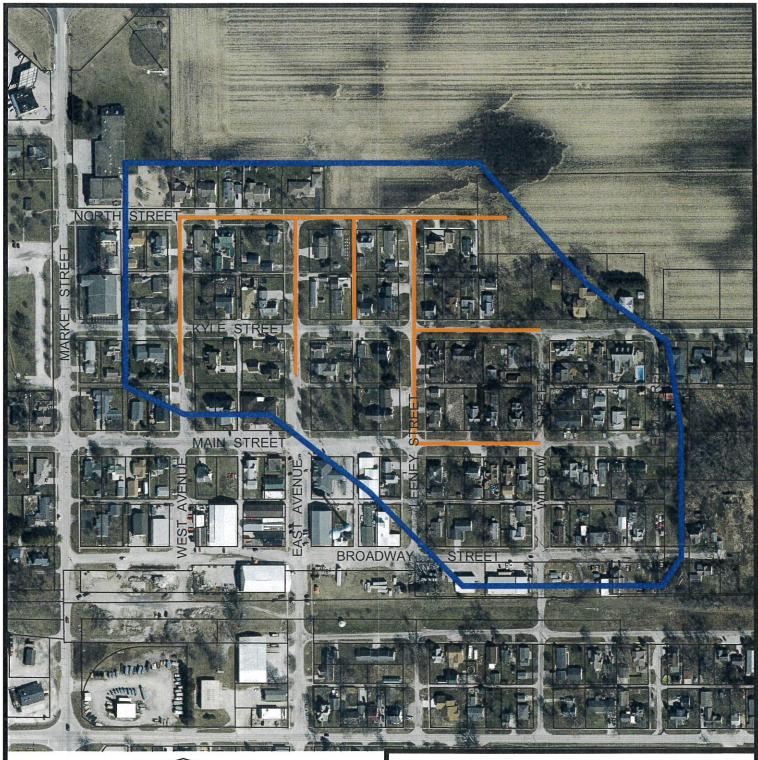

Estimated Total Project Cost: \$250,000

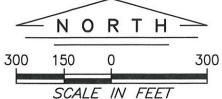

Proposed Village Cost Share: 50%

**Project Timetable:** Project under construction within 45 days ±

Design: Completed

**Permits:** Completed **Bidding / Award:** 45 days ±

### RAIL TRAIL AREA DRAINAGE PROJECT

### VILLAGE OF OGDEN, CHAMPAIGN COUNTY, ILLINOIS

March 30, 2022

**Project Description**: This project involves the construction of approximately 3,800 lineal feet of stormwater drainage facility improvements, including 1,400 lineal feet of new storm sewer piping. The project is located along the western portion of the Kickapoo Rails-to-Trails project within the Village of Ogden. This project was identified in the 2015 Village Stormwater Drainage Study as a high priority project. It is intended to solve chronic flooding along Broadway Street west of Market Street as well as chronic flooding adjacent to the prior railroad right-of-way. Providing relief to approximately 40 parcels.

This project parallels the corridor of the Kickapoo Rail-to-Trail project being constructed during the Summer of 2022 by the Champaign County Forest Preserve District (CCFPD). The project is coordinated with and compliments the Rail-to-Trail project. The project involves the installation of small diameter storm sewer lines to replace  $100 \pm 100$  year old field tile piping that is no longer serviceable. It also restores the surface waterway that existed during long ago railroad operations.

Why Funding Matters: Ogden faces a backlog of over \$2 million in drainage facility improvements. The Village has spent more than \$400,000 over the past 6 years building drainage facilities. However, outside funding sources are needed if the Village is to significantly reduce the backlog of work. Although this is not the highest priority project for the Village, the construction of the Kickapoo Rail-to-Trail project in 2022 by the CCFPD allows Ogden to piggy-back this project with that work.

Estimated Project Construction Cost: \$160,000

Estimated Total Project Cost: \$190,000

Proposed Village Cost Share: 50%

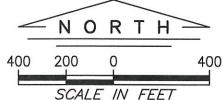

**Project Timetable:** Project under construction within 100 days ±

**Design:** 30 days  $\pm$ 

**Permits:** 30 days ±

**Bidding / Award:** 45 days  $\pm$

### WASTEWATER TREATMENT PLANT REMODELING

### VILLAGE OF OGDEN, CHAMPAIGN COUNTY, ILLINOIS

March 30, 2022

Project Description: The Ogden Wastewater Treatment Plant Facility was originally constructed in 1984 and has provided admirable service since its construction. However, as with any constructed facility, it is reaching the end of its service life. It is time for the current treatment facility to be remodeled, refreshed, and improved to meet modern treatment standards. Over the past couple of years, the Treatment Facility has not always been able to meet the minimum treatment standards established by the Illinois Environmental Protection Agency (EPA). In December of 2020 the Illinois EPA issued a Notice of Non-Compliance to Ogden, requesting that the Village establish a timeline for completing improvements to the existing Wastewater Treatment Facility. The design of those improvements was authorized in February of 2020 and is now underway. Ogden assured Illinois EPA that the necessary improvements would be fully operational by the Summer of 2023.

This project primarily consists of remodeling, repairs, and maintenance to the existing wastewater treatment facilities. The entire electrical control system needs replacement with modern components. The entire filtering system needs to be removed and replaced with a more modern and more effective design. Aeration needs to be added to the treatment process. At various locations some of the piping is nearly worn out and needs replacement. Sludge has collected in the primary treatment lagoon and needs to be removed.

Why Funding Matters: The Village is obligated to undertake these improvements within the next 18 months. Village residents are facing significant rate increases for wastewater services to pay for this improvement. Outside funding can reduce the extent of those rate increases.

Estimated Project Construction Cost: \$120,000

Estimated Total Project Cost:

\$150,000

**Proposed Village Cost Share:** 

50%

SHEET 1 OF 1

DATE: 032822

JOB: 1770-43

Project summary - The Village of Royal (Village), Illinois owns and operates an Illinois Environmental Protection Agency (IEPA)-permitted public water supply system that serves the customers within the Village corporate limits. The Village's water treatment plant was originally constructed in 1960's and for the most part, portions of those facilities have been updated, replaced and well-maintained over the years. However, the treatment plant pressure filter is in poor condition. The treatment plant only has one filter, and the failure of this filter will cause a decrease in water quality. The Village is in the process of planning the replacement of the filter with two new filters to provide backup to ensure the water quality. In order to install the two filters, the existing building will need a small addition. As part of the project the Village will also upgrade the plant control system. The Village is currently evaluating applying for an IEPA loan or a loan from the United States Department of Agriculture.

### Project timeline from the feasibility study -

Facilities Planning Study/Report Phase May 2022 – July 2022

November 2022 – March 2023

Bidding/Negotiation

Loan Application

September 2022 – April 2023

Construction

September 2023 – February 2024

Start-Up & Commissioning February 2024

**ARPA Funds** - The preliminary cost for the project is \$950,000. The Village would like to ask for \$250,000 from the Champaign County ARPA funds.

#### **Total Funding**

Village funds – \$700,000 ARPA funds – \$250,000

**Impact/importance of project needing completed** - The Village currently relies solely on one filter at the water treatment plant. The filter has out lasted its useful life and is poor condition. The filter is the only treatment the water receives besides chemical addition. The filter removes iron, arsenic, and manganese. This failure of the filter will have negative impacts on the water quality and the quality of life for the residents of the Village.

# VILLAGE OF ST. JOSEPH

#### 207 EAST LINCOLN STREET, P.O. BOX 716 • ST. JOSEPH, ILLINOIS 61873-0716 PHONE 217-469-7371 • FAX 217-469-7019

April 6<sup>th</sup>, 2022

Ms. Darlene Kloeppel Office of the County Executive 1776 East Washington Street Urbana, Illinois 61802-4581

#### Ms. Kloeppel:

As requested by your office, please see the attached request for a share of County ARPA funding. The Village has no shortage of need for project funding, so the allocation of ARPA funding is greatly appreciated. The following is our proposal:

#### **Project Summary:**

- Design of Douglas Street Storm Sewer Reconstruction

The project involves engineering for the construction of approximately 4,290 ft of 48" and 54" diameter storm sewer along Douglas St (from the intersection of Harlen Wise Dr and Douglas) to the intersection of South Elm St and Douglas St and along South Elm St (between north of Douglas St and Monroe St). The pipe would be 48-inch between Harlen Wise Dr and South Third St and 54-inch for remaining segment as shown in the layout Map. All work will be performed in previously disturbed area. Surface restoration will be included to match the existing surface conditions. The discharge point of the trunk sewer will be located north of Elm St where the Oxbow channel heads west to the Salt Fork River, and therefore the work will not affect the floodplain. Fill material will not be discharged.

#### **Project Timeline:**

Engineering (design) will last approximately 11 months. Design work can begin in July 2022 and completed in May 2023.

#### How much ARPA funding is requested for the project:

- The Village requests \$250,000.

The total cost of design work will be approximately \$500,000. While the Village would appreciate the full amount, a contribution of \$250,000 would be very beneficial to the overall effort. The Village is willing to commit local funds to the remainder of various infrastructure projects.

# **VILLAGE OF ST. JOSEPH**

# 207 EAST LINCOLN STREET, P.O. BOX 716 • ST. JOSEPH, ILLINOIS 61873-0716

#### PHONE 217-469-7371 • FAX 217-469-7019

Impact/Importance of the project needing completed:

The storm sewer is being designed to collect stormwater runoff from the future development east of Harlen Wise and stormwater flow from the existing South Basin collection system, north of Ethel St; and to convey stormwater runoff from wet weather events to the oxbow channel.

This project will address Douglas Street Storm Sewer along with other various infrastructure needs. This has the potential to address historic drainage issues, as well as set the stage for further residential growth in the community.

If you have any questions or require further clarification on any of the information provided, please let me know.

Thank you for your consideration,

Joseph Hackney Village Administrator Village of St. Joseph, Illinois

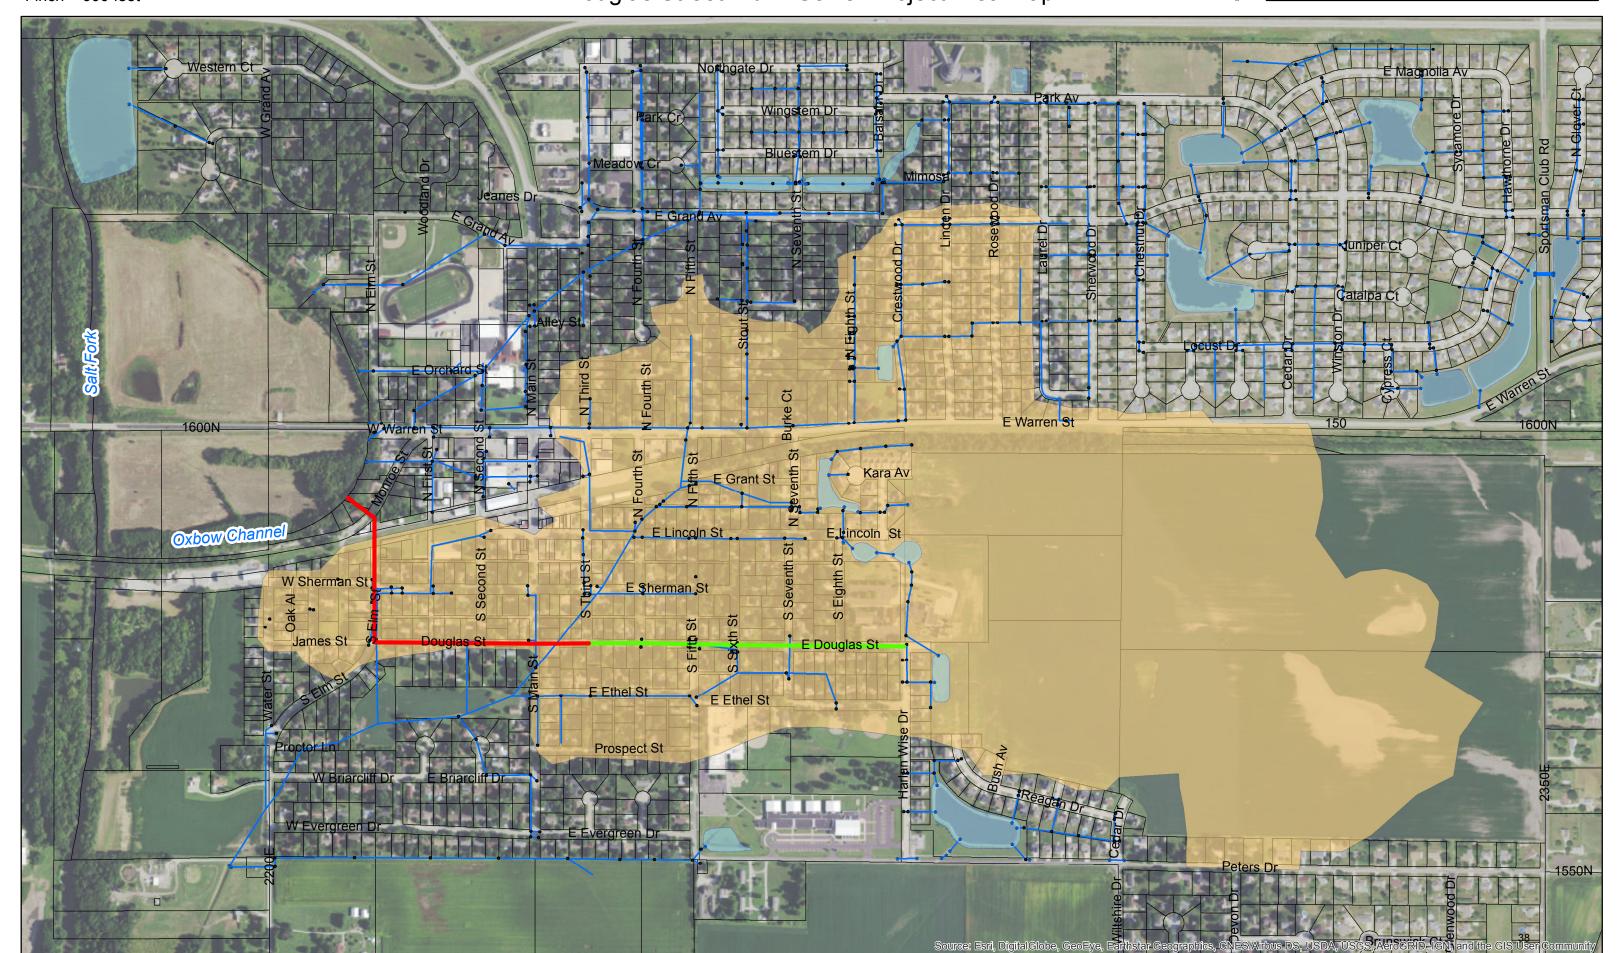

CC:

Tami Fruhling-Voges Mayor

Sean Weidner Clarke Dietz, Inc.

# Village of St Joseph Douglas Street Trunk Sewer Project Area Map

# Pesotum Consolidated Drainage District

## Overview

Pesotum Drainage district is made up of approx. 4,000 acres in Pesotum Township

Our main tiles provide drainage to the west side of the village of Pesotum

Most of the drainage system dates back to the early 1900's and is undersized and failing at alarming rate.

Requesting cost sharing funding to replace 8,185 feet of tile.

# Replace tile from Open ditch back to I-57

# Project impact

#### Locally:

- -Ensure that the approximately 300 Plus residents on the west side of down do not have flooding issues
- -Help prevent Pesotum from having issues like we recently saw in Gibson City
- -Improve Road stability and and culverts from being over run and failing

Improve safety for our community and those driving on our roads

# When surface water is not controlled

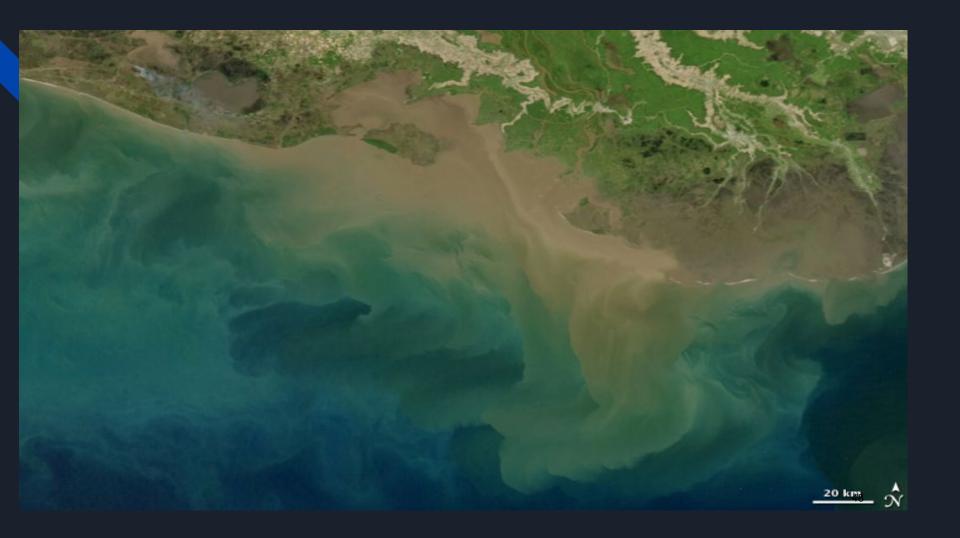

# Project Impact

#### Globally

- Help protect the health and safety of ground water
- Help reduce amount of nitrates getting into the water stream and making it down to the Gulf
- Reduce sediments in water this will help reduce ditches filling up between our drainage district all the way to the Gulf of Mexico.

# Pesotum Drainage District

- Help Protect the \$120,000 investment we made in drainage and tile work that Drains the west side of Pesotum
- Reduce the financial drain on our resources we see by repairing these tiles.
- Up-date our main tiles to the correct size and functionality needed for today's demands
- Demands are changing with 1 in 500 year events become more like 1 in 25 year events

# Drainage is a Utility

We believe that drainage in Southern Champaign county should be looked at no differently than having utilities available to landowners and residents of the village of pesotum.

# Request

We would like to request cost share funding for the 8,185 feet of tile that need replaced.

Over all cost is \$362,967.61

Would like to receive a minimum of \$181,483.80 - This would fund half of the project

We are prepared to work with the courts to levy funding for the other half of the project if you choose to help fund this project

Thank you for your time and consideration of this project to help us improve the infrastructure of the drainage in southern Champaign county.

**Project summary** -The Village of Ivesdale's (Village) entire distribution system consists of approximately 2.5 miles of water mains that were mostly constructed in 1966 while the plant was constructed. Nearly all the mains within the system are 4-inch cement **asbestos** pipe and all fire hydrants are the two-hose connection type, with no steamer nozzle. In recent years, the Village has seen an increased number of water main breaks, leaks, and other effects of long-term deterioration of these 54-year-old mains.

#### Project timeline from the feasibility study -

Facilities Planning Study/Report Phase

December 1, 2022

**ARPA Funds** - The preliminary cost for Phase 1 is \$1,100,000. The Village anticipates receiving IEPA principal forgiveness of \$400,000 The Village would like to ask for \$250,000 from the Champaign County ARPA funds. Phase 2 and Phase 3 will be in consecutive years after Phase 1. Each phase is anticipated to cost the same amount unless prices continue to increase.

#### **Total Funding**

Village funds – \$450,000 Potential IEPA Principal Forgiveness - \$400,000 ARPA funds – \$250,000

Impact/importance of project needing completed – The Illinois Environmental Protection Agency's (IEPA) Engineering Evaluations note that the "Unaccounted For" water percentage has risen to just under 15%, which is at the threshold of excessive losses. The number of main breaks and quality of these old "cement asbestos" mains had made the Village initiate a program of three phases of watermain replacement. Any water main replacement program should bring the sizes of the mains up to modern standards with new replacement mains to be sized at not less than 6-inch diameter. These projects will reduce the unaccounted-for water, thus relieving stress on the existing plant and well system. The new mains will also provide improved fire protection and life safety.

**Project summary** - The Village of Pesotum is in their pursuit of adding sanitary sewer collection and treatment to their currently unsewered community. The Village authorized a Fehr Graham to create a feasibility study to assess the options available. The report is a precursor to a planning report. The recommended alternative was regionalization which includes a new collection system, pump station and force main to Tolono for regional treatment. The Village is currently applying for Illinois Environmental Protection Agency (IEPA) grant funds for a planning report. If successful, they will receive \$25,000 toward the report. This planning phase would look at the recommended design in more detail and would include an updated cost estimate.

#### Project timeline from the feasibility study -

Facilities Planning Study/Report Phase
Design Phase (including Permit applications)
Pass Rate Ordinance
Pass Debt Ordinance
Bidding/Negotiation
Loan Application
Construction
Start-Up & Commissioning

August 2022 – March 2023 November 2022 – March 2023 November 2022 – March 2023 April 2023 – July 2023 September 2022 – April 2023 July 2023 – November 2024 November 2024 – June 2025 June 2025

January 2022 - July 2022

**ARPA Funds** - The preliminary cost for the project is \$8,107,000. IEPA also has grant funds for construction costs in unsewered communities. They have up to \$5,000,000. There are no guarantees for obtaining this grant, but the Village will apply for that grant in order to lower project costs for the community. The Village would like to ask for \$250,000 from the Champaign County ARPA funds.

#### **Total Funding**

Normal Operation

Village funds – \$6,640,950 Potential IEPA Principal Forgiveness - \$1,216,050 ARPA funds – \$250,000

Impact/importance of project needing completed - The Village currently relies solely on private treatment and discharge systems rather than a centralized wastewater collection and treatment strategy. This method has many negative impacts that affect almost all facets of a municipality, including pollution of natural resources, discouragement of future economic and cultural development, and a significant decrease in financial security for both the Village and its residents. There is a public health hazard and odor problem associated with discharging contaminated water to streams and open ditches. Similar health problems are associated with wastewater that ponds in the backyards of residents where septic tank leach fields are not functioning properly. Having a sanitary sewer system would eliminate these problems completely.

#### Project Summary and Preliminary Environmental Impacts Determination (PEID)

The following project summary and environmental assessment has been prepared by the IEPA to assist the loan applicant in complying with the public notice requirements. Information in this report was obtained, in part, from the following sources: Wastewater System Upgrades submitted August 21, 2020 by Donohue & Associates Inc. on behalf of the Village of Tolono; Applicant Environmental Checklist dated January 18, 2021; and other information gathered by the IEPA.

#### Part I - Project Information

Project Name: Wastewater System Upgrades

Loan Applicant: Tolono

County: Champaign Project Number: L175849

Current Population: 3,449 Future Population (30 year): 5,174

Project Justification & Description: The Village of Tolono (Village) owns and operates a wastewater collection and treatment system that consists of approximately 80,100 lineal feet (LF) of sanitary sewers ranging from 8-inches to 12-inches in diameter, forcemains, manholes, 6 lift stations, and a conventional activated sludge wastewater treatment plant (WWTP). The original WWTP and most of the collection system was constructed in the early 1970's. The WWTP has a design daily average flow (DAF) of 0.235 million gallons per day (MGD) and design maximum flow (DMF) of 0.588 MGD. In 1984, a berm was added to the stormwater equalization basin to create a sludge storage lagoon. In 2011, a fixed film roughing filter was added to the primary clarifiers to reduce biochemical oxygen demand (BOD) loadings to the aeration basins. There is a tertiary filter and chemical feed building that are no longer used in the treatment process. The WWTP does not have a main headworks facility. Flows enter through a comminutor that grinds up sewage on a continuous basis. From there flows are pumped through the control building for primary treatment via two primary clarifiers. Secondary treatment consists of two aeration basins, two final clarifiers, chlorine disinfection and discharge to the receiving stream. The Village's current NPDES permit does not require year-round disinfection of the dry weather flows. Sludge from the primary clarifiers and waste activated sludge from secondary treatment are combined and digested in the aerobic digesters. Digested sludge is pumped to the sludge lagoon. Sludge is typically dredged and disposed of via land application by local farmers.

There are no influent flow meters; therefore, the plant operators must guess when the DMF has been reached and divert flows to the stormwater equalization basin. The plant contains only one stormwater pump without an influent meter. Many of the WWTP components are over 30-years old and have reached the end of their useful life, reached, or exceeded their design capacity, and in some cases are no longer being utilized in the treatment process.

The Village also examined their collection system for needed improvements. The Elizabeth Street and Watson Street Lift Stations (LS's) were constructed with the original collection system. They are still functioning, but they have dry pit areas that are susceptible to potential flooding with raw sewage should any of the piping fail; are not compatible with current systems and compliance

standards; and pose potential safety issues for maintenance staff. The Deerpath LS needs upgrades for operational and security needs. It was also determined that all 6 LS's needed to be equipped with communication telemetry for monitoring.

Additionally, within the corporate limits of the Village, there are unsewered areas that utilize septic systems or percolation fields for discharge. The Village would like to extend sanitary sewers to the Unity West Elementary School, Oaks Mobile Home Park, and Sunnyfield Subdivision. This will increase wastewater flows that must be treated.

The Village and their engineers evaluated various options for wastewater treatment including a no discharge option, sending flows to another community for treatment, or upgrading/expanding the existing WWTP. They determined the most feasible option for the community would be to upgrade & expand their current WWTP. They evaluated several different WWTP options and ultimately determined upgrading and expanding the existing WWTP utilizing an Oxidation Ditch system would be the best alternative.

The proposed project consists of expanding the WWTP DAF from 0.235 MGD to 0.51 MGD and the DMF from 0.588 MGD to 1.29 MGD, a sanitary sewer extension to serve unsewered areas, and lift station replacements and improvements. New WWTP improvements include: splitter box; fine screen; raw influent pump station; excess flow pump station and forcemain; new oxidation ditch, conversion of the existing clarifiers to aerobic digestors; new secondary clarifier; chlorination and dechlorination facilities; waste activated sludge (WAS) flow meter vault; convert the old chemical building to lab and control building; convert the old filter building to chemical and blower building; demolish the old control building; electrical and SCADA upgrades; and other related appurtenances. The sanitary sewer extension includes a new submersible lift station (LS #7); approximately 4,800 LF of 6-inch diameter forcemain; approximately 1,600 LF of 8-inch diameter sanitary sewer; approximately 1,200 LF of 10-inch diameter sanitary sewer; approximately 1,200 LF of 12-inch diameter sanitary sewer; 15 manholes; and other related appurtenances. Other construction includes: replacement of the Elizabeth Street LS; replacement of the Watson Street LS; upgrades to the Deer Path LS including chopper pumps to eliminate plugging of the pumps, grouting of the wet well joints, sandblasting and recoating of the piping, fencing, and other miscellaneous repairs. All 6 of the existing LS's will receive communication equipment upgrades.

It is anticipated the year-round disinfection exemption will no longer apply. The new WWTP will provide for biological phosphorus removal, ammonia reduction, and total nitrogen reduction. The proposed WWTP work will require a modification to the existing NPDES permit prior to receiving a construction permit and loan. The proposed improvements will increase system functionality, reliability, and allow the Village to maintain compliance with current and future wastewater regulations.

**Project Location:** The WWTP upgrade/expansion will occur at the existing WWTP location on South Bourne Street. The remaining work will occur at the lift station sites mentioned above and the sewer extension will occur to the west and south of the existing WWTP. The new lift station will be constructed at South Bourne Street and County Road 600 North. See attached map for locations.

Estimated Construction Start Date: October 2021

**Estimated Construction Completion Date:** April 2023

Project Cost Estimate: \$12,550,000

#### Part II - Environmental Review and Impacts

Project construction impacts: Temporary adverse environmental impacts such as construction-associated noise, blowing dust, air emissions, traffic disruption, and soil erosion will likely occur during construction.

The project was submitted for review through the Illinois Department of Natural Resources (IDNR) EcoCAT system for compliance with the Illinois Endangered Species Act, Illinois Natural Areas Preservation Act (Section 17 Illinois Administrative Part 1075) and the Illinois Wetlands Act (Section 17 Illinois Administrative Code Part 1090). Initial review contained no record of threatened or endangered species within the project vicinity; however, further assessment was necessary for the Part 1090 wetlands review because the EcoCAT review indicated the presence of wetlands within the project area. Upon further review a joint consultation for Part 1075 & Part 1090 was issued June 17, 2020 concluding that adverse effects are unlikely.

The IDNR State Historic Preservation Office (SHPO) reviewed the information submitted for the project review and provided a letter dated July 1, 2020 indicating there are no historic properties affected by the proposed project, therefore the project complies with section 106 of the National Historic Preservation Act of 1966.

Project information was submitted to the Illinois Department of Agriculture (IDOA) to assess the potential impact to agricultural land and determine consistency with the IEPA's Agricultural Land Preservation Policy and compliance with the Illinois' Farmland Preservation Act. The IDOA determined that all construction will be constructed on private easements or public road right-of way. Additionally, the IDOA concluded that all construction will be located within Tolono's corporate boundaries and agricultural land is not being converted. A letter was issued July 23, 2020 indicating the project will be constructed in accordance with the IDOA's water and Sewer Line Construction Standards and Policies; therefore, the IDOA determined the project complies with the Illinois Farmland Preservation Act.

The U.S. Army Corps of Engineers (ACOE) also reviewed the project information. The ACOE issued an email dated January 26, 2021 stating that it appears there are no jurisdictional waters of the U.S., including wetlands, that would be impacted by the discharge of dredged or fill material associated with construction of the project. Therefore, a Department of the Army Section 404 permit is not required.

# **Champaign County Farm Bureau**

801 N. Country Fair Drive, Suite A • Champaign II 61821-2492 Phone: (217) 352-5235 • Fax: (217) 352-8768 • www.ccfarmbureau.com Bradley Uken, *Manager* 

March 31, 2022

The Champaign County Farm Bureau, in strong partnership with the Champaign County Soil & Water Conservation District (CCSWCD) and the Illinois Nutrient Research and Education Council (NREC), are proposing a county-based cover crop program. All three of the partners on this project are committed to conservation practices, soil health, clean water and helping farmers meet the goals associated with them. Each of the three partners have dedicated countless hours and financial resources through various programs to help farmers throughout the county be successful in making long-term investments in conservation.

Cover crops are crops that are planted to provide winter soil cover and are not intended to be used as a cash crop. Crops used as cover crops run the gamut of species ranging from cereal rye to radishes, plus a whole host of mixtures of various species. The 2017 USDA Census of Agriculture, which is the most accurate data available, found a 50% increase in cover crop acreage between 2012 and 2017.

Cover crops have been proven to be highly successful in reducing nutrient runoff, preventing soil erosion, improving soil health, and helping control weeds, pests, and diseases. Cover crops often grow very deep roots, deeper than corn and soybean plants. These extensive root systems help mitigate compaction issues in fields by loosening the soil and creating a better seed bed for spring planting season. With the challenges of herbicide resistant weeds, cover crops are also a potential avenue to control those weeds and reduce herbicide usage. The USDA's Sustainable Agriculture Research and Education program's 2019-2020 Cover Crop survey found that 91.2% of farmers reported an improvement in weed control after a solid stand of cereal rye cover crop. This report also found that 68% of farmers who planted a cash crop like corn or soybeans into a still-living cover crop reported better soil moisture management.

Despite the positive impact cover crops have, the challenges to widespread adoption of these practices are vast. Farmers lack the financial flexibility to invest in the added seed cost, the additional passes over the field, and to withstand the possible decrease in yield during the first years of cover crop usage. It takes multiple years for soil quality and moisture management benefits to be measurable enough to offset the initial investment cost. Unfortunately, these challenges have slowed the growth of planted acres among first time growers of cover crops.

Recent incentive programs have had great success in increasing the acreage on which cover crops are utilized. One example of incentive efforts is through the Illinois Department of Agriculture's (IDOA) Fall Covers for Spring Savings program. Over the last three years the IDOA has offered a \$5 per acre incentive for farmers to plant cover crops. In 2020, the 50,000-acre statewide allotment was met in

12 hours and a total of 185,000 acres were requested. The IDOA has doubled their allotted acreage for 2022 to 100,000 acres, still below the total requested last year. Additionally, the CCSWCD has funds available for cover crops, but funds available varies depending on state allocation each year. Utilizing incentives to increase the usage of cover crops has proven to work. However, virtually, none of these dollars are directly allocated to Champaign County, as we are proposing, but rather are allocated on a statewide, regional, or national level.

The American Rescue Plan Act (ARPA) under its Investment in Infrastructure and Water section specifically allows for funds to be utilized to address non-point source pollution. Non-point source pollution as defined by the US EPA as resulting from land runoff, precipitation, and/or drainage. Furthermore, the EPA explains that non-point source pollution is caused by rainfall or snowmelt moving over and through the ground. As the runoff moves, it picks up and carries away natural and human made pollutants, depositing them in various bodies of water. The EPA identifies two specific sources of non-point source pollution that can be attributed to agriculture: excess fertilizers, herbicides, and insecticides from agricultural lands and sediment from crop lands. It is clearly stated in the final rules that ARPA funds can be used for non-point source pollution. Cover crops are part of larger solution to address non-point source pollution through prevention of soil runoff, reducing herbicide and fertilizer usage, and by filtering both surface and sub-surface water.

The Champaign County Farm Bureau and our partners (CCSWCD and NREC) are requesting \$245,000 from the ARPA funds to accelerate the usage of cover crops in Champaign County. The funding will allow Champaign County farmers to be at the forefront of the farm conservation effort and will allow Champaign County to become an example of how local investment in farm conservation efforts can drive change.

#### **Budget Outline**

- **\$245,000** is budgeted to be spent in total in 2022, 2023, and 2024
- \$36,500 over three years to be spent on farmer/landowner training, education and field days. Also included in this figure is dollars for NREC to complete a study/white paper on the project.
- \$208,500 over three years to accelerate the usage of cover crops through a per acre incentive paid to the farmer or landowner.
  - \$69,500 to be spent on an annual basis incentivizing usage of cover crops
  - **\$33 per acre** in incentive. On 40 acres that would be an incentive of \$1,320. A minimum of 5 acres planted in cover crops would be needed to participate in the program.
  - o 2,106 acres of cover crops would be incentivized each of the three years of the program.

In January 2022, farmdocDAILY published an article titled *Policy Budget for Cover Crops and the Lesson of Crop Insurance*. The authors, Gary Schnitkey, Department of Agricultural and Consumer Economics at the University of Illinois and Carl Zulauf, Department of Agricultural, Environmental and Developmental Economics at Ohio State University outlined several financial challenges impacting farmers planting cover crops. Key among those were as follows:

- "Current evidence largely suggests cover crops do not raise yields or returns in the first years of adoption."
- "Lack of clear evidence of higher return or lower risk means public subsidies will have to be paid to incentivize the planting of cover crops."
- "For cover crops, practice cost is at least the planting cost of seed, equipment, and labor. We estimate that it averages at least \$37/acre as of 2021. It will vary by farm, farmer, land, and agroclimate."
- "...the subsidy needed to obtain a large planting of cover crops will need to be sizable and will need to increase as the target acres of cover crops increase."

Two aspects of the program that the partners want to highlight are ensuring that small farmers have equal opportunity for funding and that first time planters of cover crops also have an opportunity for funding. To achieve these goals, the partners, through the application process, will provide extra points to those that are first time planter of cover crops and are considered small farmers. These additional points and the manner of distribution will be clearly outlined on the application for applicants to understand prior to apply for the incentive dollars.

The program partners will perform random verification checks on 20% of the farmers/landowners enrolled in the program. This verification process will confirm planted acres, seed variety planted, and seeding rate along with other pertinent information.

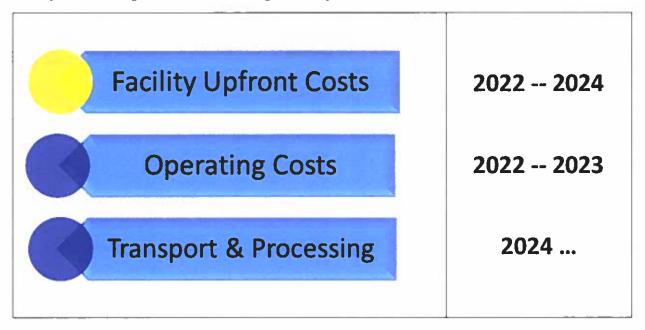

We feel a key to the success of a cover crop program is making it a multi-year program. Incentivizing farmers and landowners to try cover crops over multiple years will allow farmers to get to the point where the returns of investment in cover crops will start to eclipse the cost of implementation. It will also allow farmers the time to evaluate all their options with regards to cover crop implementation and let them make the best management decisions for their farms.

All partners will work in concert with each other on the project. Generally, the Champaign County Farm Bureau will handle the education portion of the program, the CCSWCD will work with farmers/landowners on their application and signing up, and NREC will develop grower surveys and develop a white paper on the outcomes of the program. However, each group will provide input and resources to other aspects of the program.

The vision of the Champaign County Farm Bureau, CCSWCD, and NREC is that farmers across the county will embrace cover crops to further improve the health of the soil, water, and the environment. This program offers a unique opportunity to demonstrate that a local commitment can have a significant impact on conservation in the county. We believe this program will show that focused programs at a local level will have an impact on cover crop usage in Champaign County. We strongly believe that with the help of ARPA funds we can accelerate these advances for the betterment of farmers, landowners, and our urban neighbors.

#### **CCES Project: Acquire Existing Warehouse/Storage Facility**

The three separate pieces of the puzzle align positively with the ARPA funds to be obligated by Dec 31, 2024 and expended by Dec 31, 2026...

Upfront Costs: CCES expected to launch its capital campaign in Spring 2022 for a 18-month period or possibly a two-year period, 2022-2024.

Operating Costs: Separately, but concurrently during 2022 and 2023, as part of the annual budget review process, CCES will seek to procure commitments to cover operational costs for a HHW collection facility. CCES will consult with the county and all municipalities in Champaign County, and from other identified stakeholder groups.

**Transport & Processing Costs:** Wonderful news is that IEPA recently indicated that—beginning in 2024, IEPA will appropriate \$275,000 annually to cover transportation and processing costs for five new HHW collection facilities to be established in areas of the state remote from the limited network of existing HHW Collection Facilities.

# Upfront Project Costs: Capital Campaign, Real Estate, Permitting, & Equipment: \$1,500,000 - \$1,750,000

|    |  | \$1,500,000       |                      | \$1,750,000       |                      |
|----|--|-------------------|----------------------|-------------------|----------------------|

Project summary. Establish a Household Hazardous Waste Collection Facility in central Champaign County

#### Is this the same request ELUC considered in September 2021? What's different about this request?

Champaign County Environmental Stewards (CCES) requested Champaign County APRA funds in September 2021 and returns with the following modified request for Champaign County ARPA funds this April.

| September 2021  | April 2022   |
|---|--|
| ARPA Funds Request  | ARPA Funds Request   |
| Year 2022 \$472,110<br><u>Year 2024 \$2,583,670</u><br>Total: \$3,055,780   | Year 2022 \$480,000<br><u>Year 2023 \$170,000</u><br>Total: \$650,000  |
| <ul> <li>In 2022, the amount of \$472,110 to complete planning, design, permitting, and acquiring land for a new facility.</li> <li>In 2024, the amount of \$2,583,670 to complete facility construction, targeted for completion in 2024.</li> </ul> | <ul> <li>In 2022, the amount of \$480,000 to purchase or lease an existing facility of 6,000 - 8,000 square feet of industrial/warehouse space in central Champaign County.</li> <li>In 2023, the amount of \$170,000 to be used for architectural plans, permitting, and re-purposing the existing facility.</li> </ul> |

CCES will use the requested ARPA funds only to support upfront costs for CCES to establish a fixed Household Hazardous Waste Collection Facility in central Champaign County.

CCES intends to purchase and re-purpose the facility. At such time that the facility is operational, CCES will arrange for property maintenance.

CCES Project to Acquire Existing Facility. The nonprofit organization Champaign County Environmental Stewards (CCES) seeks to purchase or lease an existing facility of 6,000 - 8,000 square feet of industrial/warehouse space in central Champaign County to serve as a fixed Household Hazardous Waste Collection Facility. Best available information is that existing industrial or warehouse space in central Champaign County is limited, leasing at \$4-\$8 per square foot and selling at \$30-\$60 square foot.

#### **Overall Project Timeline.**

| - | Conduct capital campaign to purchase or lease warehouse facility           | 15 months, starting April 2022 |
|---|--|--------------------------------|
|   | Receive stakeholder commitment and support for operational costs           | 2022-2023                      |
| - | Develop facility plans and apply for local siting approval and IEPA permit | 2022-2023                      |
| - | Re-purpose existing space for HHW facility                                 | 2023-2024                      |
|   | Arrange for IEPA intergovernmental agreement                               | 2023-2024                      |
| - | HHW Collection Facility grand opening                                      | 2024 -2025                     |

#### ARPA Funds.

Upfront costs estimate (includes real estate acquisition, plan development, permitting, and equipment): \$1,500,000 to \$1,750.000. CCES is requesting \$650,000 from the Champaign County ARPA funds.

#### MORE ABOUT THE CCES PROJECT

#### 1) Upfront Project Costs: Real Estate, Plan, Permitting, & Equipment: \$1,500,000 - \$1,750,000

| Potential for grant funds:          | Presently unknown. Non-existent in recent years. |
|-------------------------------------|--|
| CCES capital campaign:              | \$850,000 - \$1,100,000 (in progress)            |
| Champaign County ARPA fund request: | <mark>\$650,000</mark>                           |

#### 2) Operating Costs: \$175,000 annually

Local government agencies and stakeholders will be asked to share operating costs of a newly established facility. During 2022, CCES will make a separate request to each local governmental entity to provide their fair-share proportionate amount of support for operating costs. (A best estimate is that Champaign County would be asked to provide roughly 14.5% of the operating costs, or \$26,000 annually.)

#### 3) Processing, Transport, and Generator Liability Costs: \$275,000 annually

To improve availability of HHW infrastructure in Illinois, the <u>Illinois EPA has agreed</u> to annual appropriations of an additional \$275,000 per new HHW facility, for up to five additional HHW collection facilities to be established in areas of the state sufficiently remote from the limited network of existing HHW collection facilities. This annual IEPA funding support is expected to be available beginning July 2024 through June 2027. CCES wants to use this IEPA funding to establish a HHW Collection facility in Champaign County in 2024 or in 2025.

#### Impact/importance of project needing completion:

A safe and effective HHW collection facility in Champaign County, one convenient to residents with regular year-round, part-time hours, can decrease the risks of:

- Groundwater and surface water contamination from HHW dumping,<sup>3</sup>
- Accidental poisonings, or other medical problems from hazardous chemical exposure in thehome.<sup>4</sup>
- HHW-initiated or accelerated house fires,
- Firefighters' exposure to hazardous chemicals and highly toxic smoke while responding to housefires,
- Solid waste workers exposure to improperly disposed chemicals,<sup>5</sup>
- Damage to solid waste infrastructure (including trucks, recycling facilities, landfill liners, etc.),
- Wastewater treatment plant upsets,<sup>6</sup> and
- Upset and damage to residential septic systems.

#### Notes

- 1. The facility additionally will serve as a year-round Program Collection Site for Champaign County residents to participate in the Residential Electronics Collection program administered by the Illinois EPA and supported by electronics manufacturers doing retail business in Illinois.
- 2. Recent conversation with real estate broker Jill Guth, of Guth & Associates.
- 3. Overall, between 40 and 50 percent of the US population depends on groundwater as its primary drinking water source, but that percentage is much higher in rural areas. Without access to properdisposal methods, these groundwater sources could potentially become contaminated by HHW if poured on the ground or dumped into a roadside ditch.
  - The Mahomet Aquifer Protection Task Force: Findings and Recommendations published December 21, 2018, identifies 'household hazardous waste/pharmaceuticals and personal care products' as Potential and Current Contamination Threats to the Water Quality of the Mahomet Aquifer.
- 4. U.S. poison control centers logged 2.1 million human exposures and 2,619 deaths in 2019. These are mostly acute exposures and occur disproportionately in children five years and younger. See, Gummin, David D, Mowry, James B, et. al., "Abstract of 2019 Annual Report of the American Association of Poison Control Centers" National Poison Data System (NPDS): 37th Annual Report —PubMed (nih.gov), December 2020, and also the 2019 Poison Control Data Snapshot, at <a href="https://piper.filecamp.com/uniq/UbJLy30geHredpFe.pdf">https://piper.filecamp.com/uniq/UbJLy30geHredpFe.pdf</a>.
- 5. Waste collection workers in Maine were recently burned by hydrochloric acid, improperly disposed in the solid waste. Press Herald, 2020, <a href="https://www.pressherald.com/2020/11/05/waste-collectors-injured-by-chemicals-in-trash/">https://www.pressherald.com/2020/11/05/waste-collectors-injured-by-chemicals-in-trash/</a>.
- 6. Municipal wastewater treatment systems are not designed to treat hazardous wastes, and hence such hazardous waste containing heavy metals and synthetic chemicals can pass directly to the effluent and sludge, lead to groundwater contamination, and compromise worker safety.

# Champaign County American Rescue Plan Act Funds

Request: Household Hazardous Waste Collection Facility

**Excerpt of** 

Handout from the ELUC Study Session in September 2021

- Interim Final Rule 31 CFR 35.6(e)(1)
  - Clean Water State Revolving Fund (CWSRF) eligible project
    - HHW, improperly handled, stored, or disposed of, is a type of nonpoint source pollution
      - HHW collection facility to address nonpoint source pollution

#### Only capital costs are eligible, under the CWSRF loan program.

- The Interim Final Rule provides governments with wide latitude to identify investments in water and sewer infrastructure that are of high priority for their own communities.
- The types of projects eligible for CWSRF assistance include projects to construct, improve, and repair wastewater treatment plants, control non-point sources of pollution, improve resilience of infrastructure to severe weather events, create green infrastructure, and protect waterbodies from pollution.

- Year 2022 \$472,110
- Year 2024 \$2,583,670

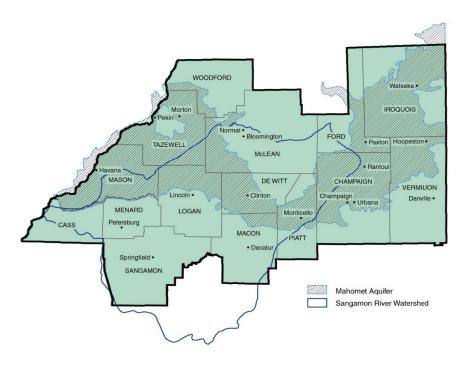

# Request for Champaign County ARPA Fund Support: \$3,055,780

This request for Champaign County ARPA funds is for capital costs for a HHW Collection Facility to be developed at a central Champaign County location. This is a two-part request:

- In 2022, the amount of \$472,110 to complete planning, design, permitting, and land acquisition for the facility.
- In 2024, the amount of \$2,583,670 to complete facility construction, targeted to commence in in 2024 and be completed within that year.

# Why we need a HHW Collection Facility

• Mahomet Aquifer Task Force Report -- HHW is contamination threat

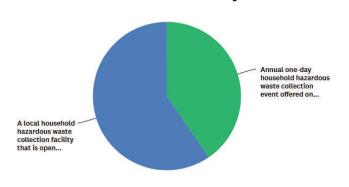

- The Mahomet Aquifer Task Force 2018 Report identified inadequate or improper HHW management as a contamination threat one of six contamination threats to the Mahomet Aquifer.
- Any hazardous chemical constituents, including HHW,placed or dumped on the ground in the recharge area, can potentially contaminate the aquifer.
- Improving the management and collection of HHW collection in the region is an investment in maintaining the quality of the Mahomet Aquifer.

# Why we need a HHW Collection Facility

• HHW Collection option needs to be <u>convenient</u> and <u>consistent</u>.

### **CCES HHW Collection Survey**

| ANSWER CHOICES  | * | RESPON | SES |
|---|---|--------|-----|
| <ul> <li>Annual one-day household hazardous waste collection event offered on the same Saturday each spring.</li> </ul> |   | 40.42% | 213 |
| <ul> <li>A local household hazardous waste collection facility that is open year-round on a part-time basis.</li> </ul> |   | 59.58% | 314 |
| TOTAL   |   |        | 527 |

- Unless a HHW collection option is both convenient and accessible.... that collection option will not be effectively utilized by residents. This maxim is well-known among collection professionals and backed up by a number of studies.
- Having a HHW Collection facility will increase the convenience of collection options available to residents from once/ year to at least 24 times/year (twice monthly).
- 60% of the 527 respondents to the online HHW collection survey, currently open at the CCES website, indicated that they prefer a HHW collection facility that is open part-time year-round.
