ATTACHMENT 1

Project summary - The Village of Royal (Village), Illinois owns and operates an Illinois Environmental Protection Agency (IEPA)-permitted public water supply system that serves the customers within the Village corporate limits. The Village's water treatment plant was originally constructed in 1960's and for the most part, portions of those facilities have been updated, replaced and well-maintained over the years. However, the treatment plant pressure filter is in poor condition. The treatment plant only has one filter, and the failure of this filter will cause a decrease in water quality. The Village is in the process of planning the replacement of the filter with two new filters to provide backup to ensure the water quality. In order to install the two filters, the existing building will need a small addition. As part of the project the Village will also upgrade the plant control system. The Village is currently evaluating applying for an IEPA loan or a loan from the United States Department of Agriculture.

Total Funding

Village funds – \$700,000
ARPA funds – \$250,000

Impact/importance of project needing completed - The Village currently relies solely on one filter at the water treatment plant. The filter has out lasted its useful life and is poor condition. The filter is the only treatment the water receives besides chemical addition. The filter removes iron, arsenic, and manganese. This failure of the filter will have negative impacts on the water quality and the quality of life for the residents of the Village.
